frozen pipes, broken
pipes, broken dishwasher
hose or leakage, washing
machine overflow,
leaking roof, basement
leaks, foundation cracks,
plumbing leaks, sump
pump overflow and leaks
from bad weather such as
snow, rain or floods.

Wireless Remote Monitors with Early Warning System Helps Prevent Costly Property Damage

Did you know that on average, frozen pipes that crack and burst damage a quarter million properties each year? Water heaters with a slow leak or a sudden burst can also cause extensive damage; the worst, most costly damage occurring in unoccupied homes.

The best defense against water damage to your home, second home, business or vacation rentals is the Superior Pump Water Detector with early warning text & e-mail alerts to notify you of a water leak before it has time to cause extensive damage.*

**250 gallons of water can flow
from an 1/8 inch crack in one day.**

Use your smartphone, tablet or computer to monitor for water leaks and high or low temperature and humidity levels that could lead to frozen pipes and mold.*

Simply connect the gateway to your network router to enable remote monitoring with text and e-mail alerts from anywhere with Internet access.* Wall-mount the water detector, or use the included tabletop stand and place the moisture sensor on the floor to activate the wireless alert system when it becomes wet.* Alerts are sent when pre-set temperature and humidity levels are exceeded and when the batteries are low or the connection is lost.*
